Dear friends,

4/5/1986

Ch 2/4/1986, just after noon a
WEDNESDAY

photograph was taken of the radar tower
(which was operating at the time). In the background
were 3 dark round objects. Either birds,
darkest aircraft (unlikely as the cloud was
low, prior to thunderstorm, one wind flock
sawing all afternoon) or something very
interesting perhaps. The negative of the film has
been sent for enlargement prints. ( resembles
the left hand object, actual size -) ^{fine} _{edges}

UFO's tend to peak every 11 years, corresponding with the peak growth rate of output activity
