SEC(AS)2a

UNUSUAL SIGHTING ANDOVER AREA

Reference: D/Sec(AS)12/3 dated 4 October 1985

1. Thank you for the reference and the enclosed photographs which are returned.
2. We have looked with interest at the photographs and the AAC report. Certainly something unusual has happened but just what remains a mystery. From a purely defence viewpoint I do not think that there is anything in the report to worry us. There does not appear to be a landing as such since the wheat is only depressed (not completely flattened) there are no tracks in the wheat and there does not appear to be burn or scorch marks which could indicate that some type of combustion engine. Furthermore there has been no evidence of any unusual sightings in the area just before the depressions were discovered.
3. Nevertheless something unusual has occurred; I lean to some kind of natural phenomena such as mini-tornadoes bouncing off the ground. However, the theory does not account for the regular configuration - perhaps the most unusual feature.
