2. Later in the night a red sun-like light was seen through the trees.
It was about 100 feet in diameter. At one point it appeared to throw off glowing
particles and then broke into five separate white objects, and then dis-
appeared. Immediately thereafter, three star-like objects were seen
in the sky. The objects to the north and one to the south, all of which
were about 10' off the horizon. The objects were rapidly in sharp angular
movements and displayed red, green and blue lights. The objects to the
north appeared to be elliptical through an 8-12 green lens. They then
turned to full circles. The objects to the north remained in the sky for
an hour or more. The object to the south was visible for two or three
hours and seemed to stream off light from side to side. Numerous lights
flashed, including the undersides, witnessed the activities in chronological
order.
